# Push bar

TECNO5 Automatic Push Bar, is designed to transfer the printed items from the machine conveyor to the lehr belt. The unit can be designed in a single or double body- arrangement, in order to allow loading of the lehr from two different printing machines, minimizing space, energy and work force utilization . Furthermore , the optional “antistrike” feature , allows a safe handling for the most unstable bottles and gives the possibility to leave free areas on the belt to avoid a “ domino” effect in case of accidental fall of the bottles.

Supply voltage	3/PE AC 400V
Installed power	1,6 kVA

Compatible with all machine TECNO5
